

Some considerations when evaluating AI-based platforms for CI monitoring (checklist)

- Is the platform appropriate given the congresses that need to be evaluated?
- Are sufficient congress data available online for ingestion, upload or integration into the platform?
- How much training (if any) will teams need to use the system?
- What analytic capabilities are already embedded within the platform vs. what will need to be added/created?
- How will you/your team generate insights based on findings from the platform?
- What is your plan for pre-, peri-, and post-meeting coverage? Do you need it for 1 meeting or many (ie, can you bundle services?)
- How is the information stored? For how long?
